1 Linear Search Algorithm

Suppose we have an array:

8	6	12	5	9	7	4	3	16	18
0	1	2	3	4	5	6	7	8	9

⏟
key

Figure 1: Searching for key = 3 after 7 steps

Algorithm 1 Linear Search Algorithm

```
1: procedure LINEARSEARCH( $A, n, x$ )
2:   for  $i \leftarrow 0$  to  $n - 1$  do
3:     if  $A[i] = x$  then
4:       Return  $i$ 
5:     end if
6:   end for
7:   Return  $-1$ 
8: end procedure
```

8	6	12	5	9	7	4	3	16	18
0	1	2	3	4	5	6	7	8	9

Not Found!

Figure 2: Searching for key = 0 after 10 steps

Best Case \implies Searching key element is present at index 0. Then it will take $O(1)$.

Worst Case \implies Either the element is absent or its at last index. Then it will take $O(n)$.
